

# Graphic design

(Or, How I Learned to Stop Worrying  
and Love the Grid)

Ollie Palmer / AKV St Joost / Nov 2019

# Who this is for

This is a short guide to making any graphic content: posters, diagrams, books, zines, websites, etc. It's useful for anyone who has to make graphic content.

Often the job of graphic layouts can be confusing: so many fonts, ways to lay things out, the horror of a blank page! A few simple rules will make your life easier.

# Purpose

Graphics are there to facilitate the transfer of your knowledge to the audience.

They should present information in a logical, ordered way, with a clear hierarchy, whilst not distracting the reader.

# Hierarchy

Put the most important information  
in the most prominent place.

It's far easier to work this out on paper than on a computer.

serif

# How many fonts?

Only use one or two typefaces per document.

If combining fonts, make sure each one brings something fresh and distinct. A sans-serif body mixed with a serif header, or vice-versa, often works well.

If in doubt, stick with one sans-serif typeface.

# General rule

Use sans-serif typefaces!

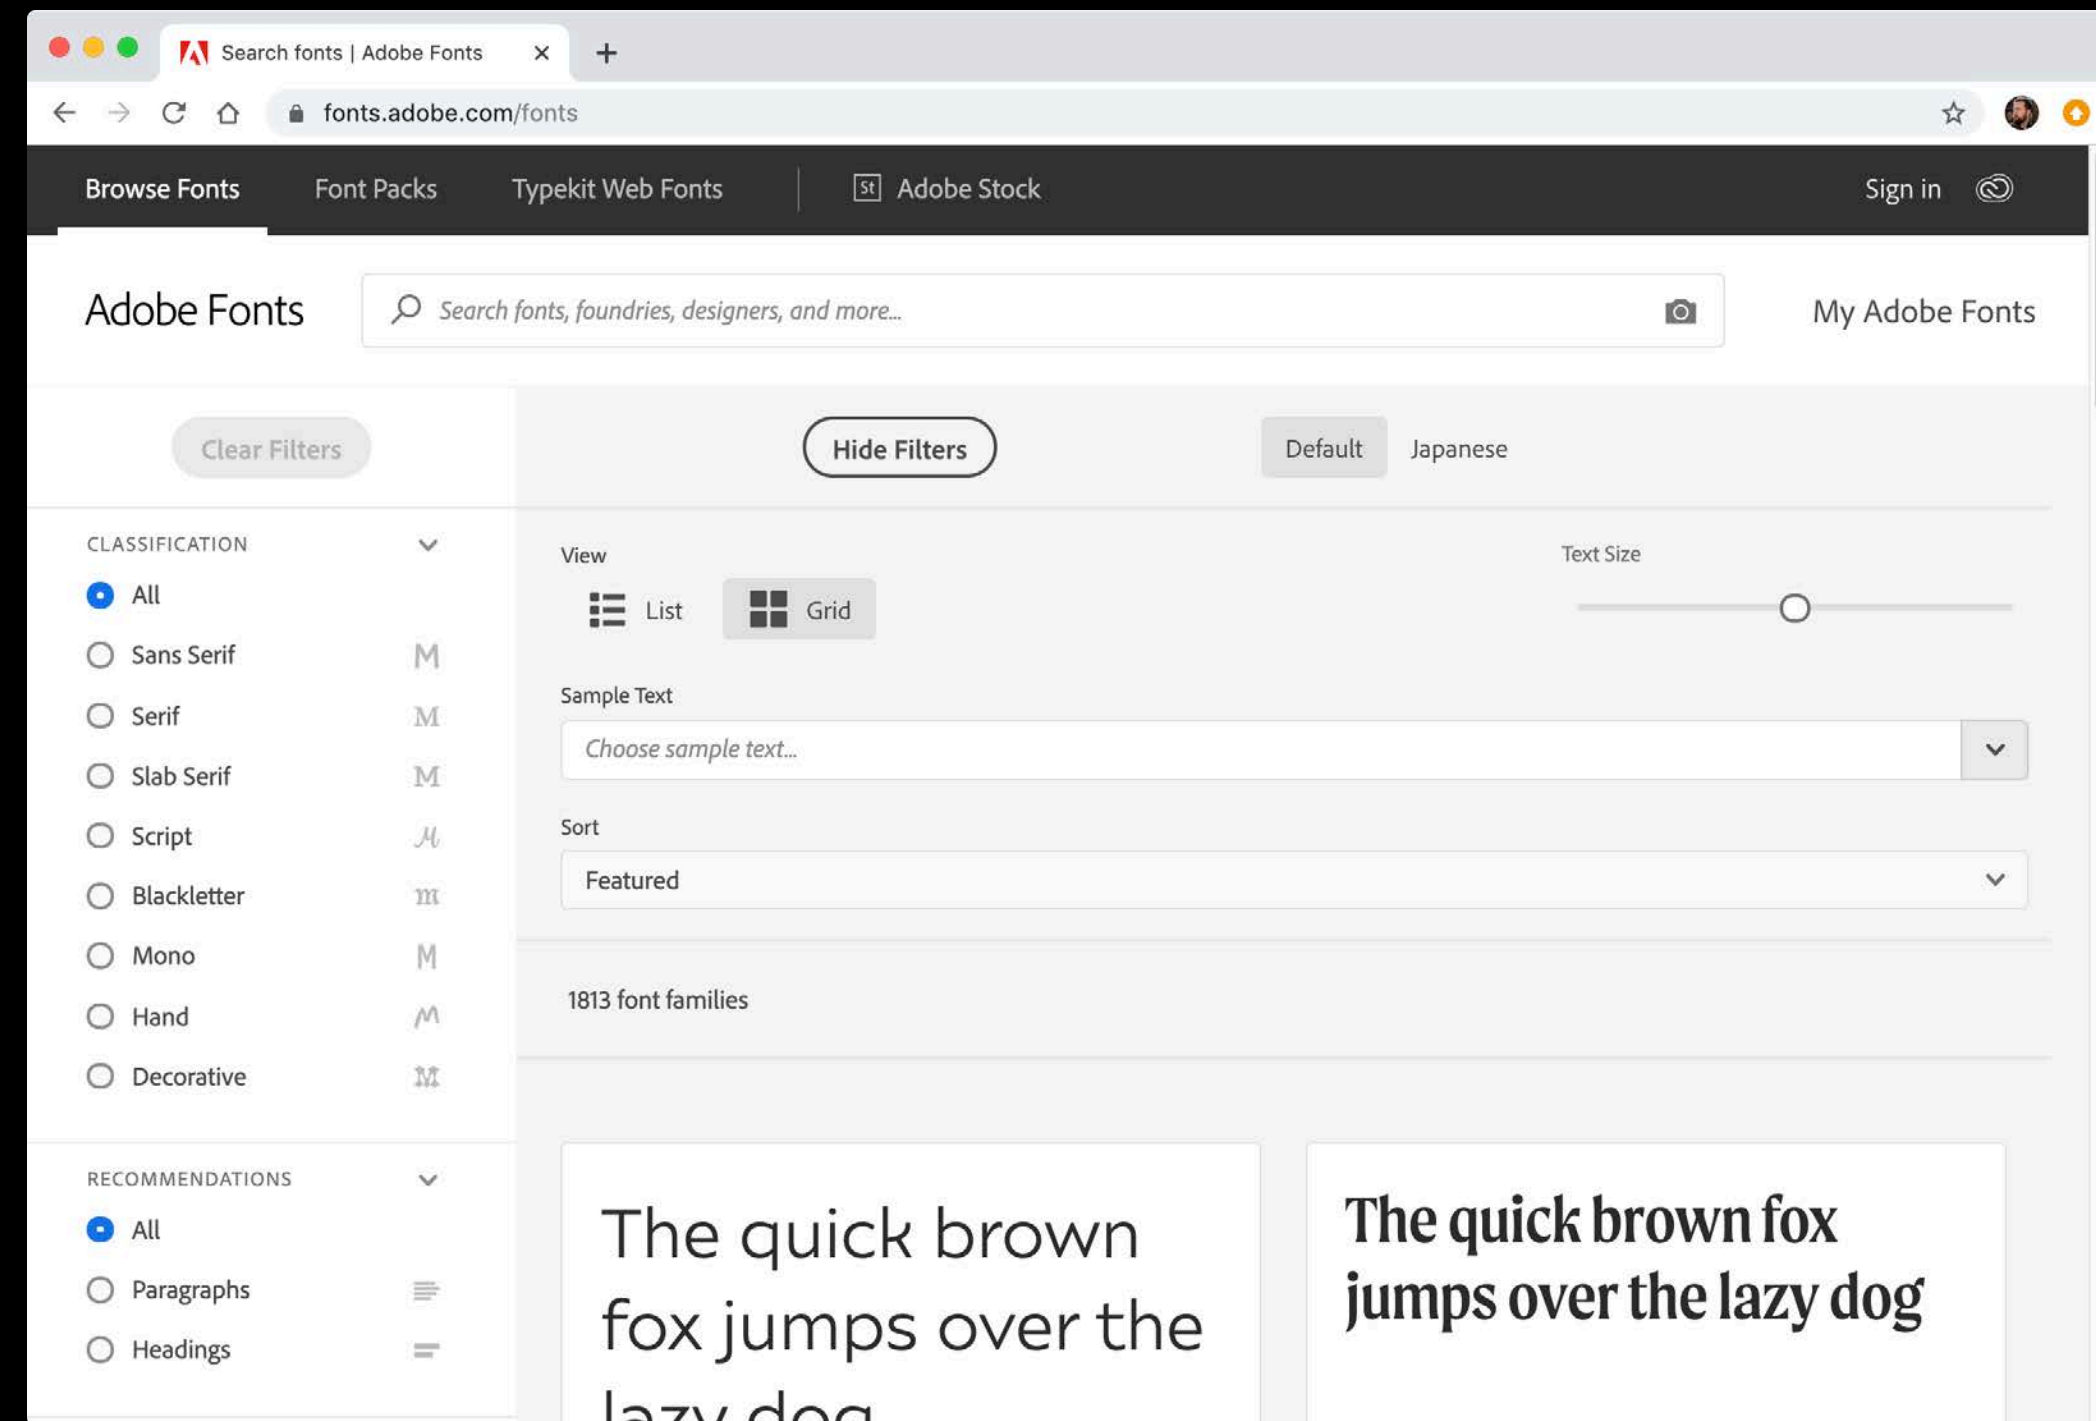

They are cleaner, and easier to read from a distance.

Helvetica Neue, Acumin Pro, Aktiv Grotesk, and Proxima Nova are all solid choices.

# Look for a family

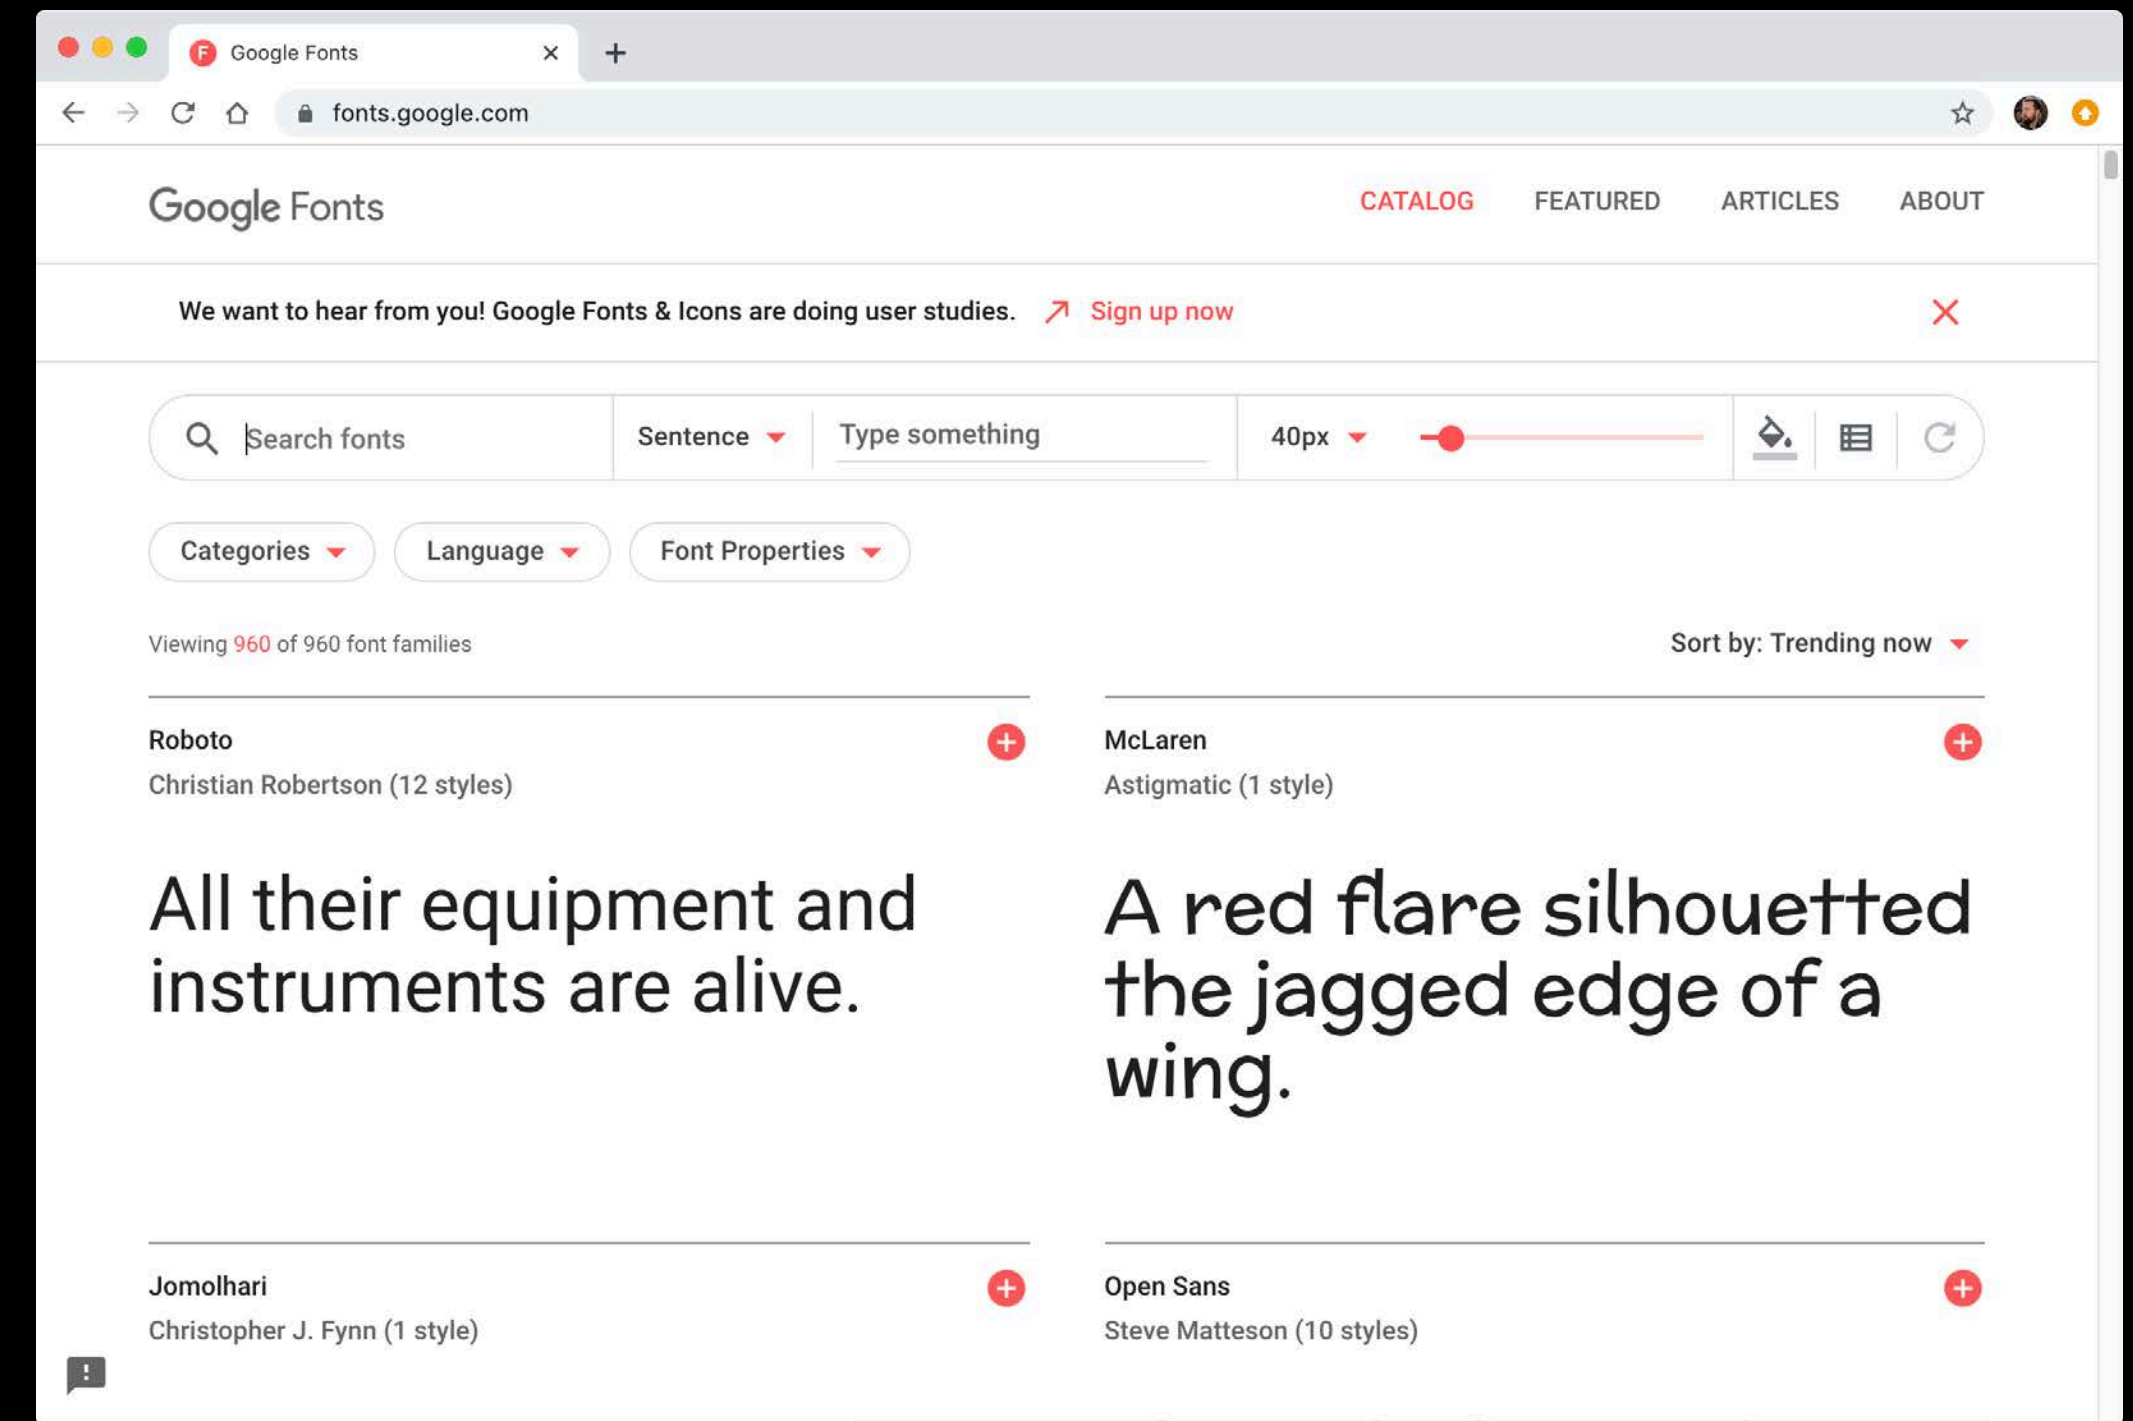

A type family will enable you to vary the **emphasis** without confusing your reader.

If you have an Adobe Creative  
Cloud subscription:

# Ordering information

You should be able to use a limited number of type styles:

- Title
- Heading 1 / 2 / 3
- Body text
- Quote
- Footnote

Anything else should be implied through your layout.

date + time

Heading 2

# really cool band name

# Stylesheets

Stylesheets save you time, and ensure visual consistency.

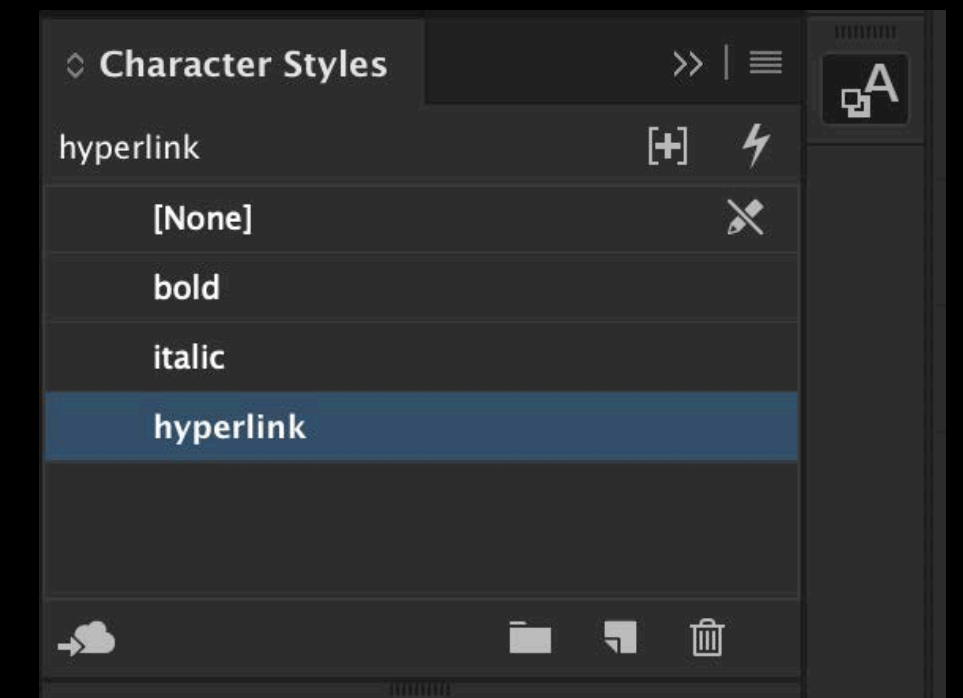

# Stylesheets

This is a paragraph. All of the words within it will be formatted in the same style, unless they're **overridden** by *character styles*.

Avoid the **B** / U buttons; use Character Styles instead. If you have to change styles later, they will all change at once!

Paragraph Styles

Character Styles

# Breathing space

Make sure there is a balance of white space to enable your work to “breathe”

It's too easy to cram everything onto one page. A few well-placed graphics say far more than a wall of dense, hard-to-interpret information.

Here is some text

Here is some text

font size ↑ Here is some text

line height ↑

T h e q u i c k b r o w n  
f o x j u m p e d o v e r  
t h e l a z y d o g .

The quick brown  
fox jumped over  
the lazy dog.

The quick brown

the lazy dog.

The quick brown  
fox jumped over  
the lazy dog.

The quick brown  
fox jumped over  
the lazy dog.

Lorem ipsum dolor  
amet sit verbatim ect

# Line heights

Use consistent font sizes and line heights.

A good rule of thumb is 1:1.5 font height to line height:

- 10pt font / 15pt line height
- 20pt font / 30pt line height
- 40pt font / 60pt line height

Making your line heights multiples of each other means it's easier to make sure lines of text are in line with each other!

# Widows

Widows are single words at the end of a paragraph.

Ut molestie tortor in mi commodo facilisis. Nam molestie, augue et placerat porta, eros risus volutpat nibh, tincidunt porttitor enim velit id eros. Nullam et quam et elit posuere vulputate. Praesent pulvinar varius rhoncus. Aenean ac erat et lectus laoreet eleifend. Quisque et porttitor sem. In eleifend molestie lacus. Phasellus et ante sit amet lacus pulvinar porttitor sit amet quis lorem. Etiam rutrum pretium arcu quis mollis. In hac habitasse platea dictumst. Vivamus eget diam nec leo bibendum tempus eget sed purus. Morbi tempor commodo tempus. Sed at pretium leo, eu placerat sapien. Donec volutpat quam.

Use a 'soft return'  
(CTRL-Enter on Mac)  
to avoid them!

# Type: recap

Pick 1-2 typefaces and stick with them

If in doubt, sans-serif

Use *families* over different fonts

Stylesheets are your friend

Give type space to breathe

# Type: **avoid**

Don't mix similar fonts!

Don't use lots of typefaces

Don't pack everything into a tiny space

Avoid widows and orphans

# Colour

You can use colour palettes in the same way you use styles!

The easiest way to create complementary palettes is on [color.adobe.com](https://color.adobe.com) (no subscription required).

# File formats

Using the right tool for the job  
will save you time and frustration.

File formats make a big difference to your  
workflow! An appropriate file format will load  
faster, use up less space, and be easier to edit.

# Logic and information flow

Think about the story you'd like to tell your audience, and order your information accordingly.

People read graphics in 'chunks.' Think about the ordering of those chunks – if you had to explain this idea to somebody who knew nothing about it, what would you say? Where would you start?

Things  
I've  
already  
made

Things  
I want  
to make

# Clean diagrams

Simple and easy-to-read

# Grids

Grids are the 'invisible scaffolding' which hold graphics together.

"To reach our intention nothing could be more useful than the grid. The grid represents the basic structure of our graphic design: it helps to organise the content, it provides consistency, it gives an orderly look and it projects a level of intellectual elegance that we like to express."

*Massimo Vignelli, The Vignelli Canon*

# File formats

File formats make a difference!  
An appropriate file format will  
load faster, use up less space,  
and be easier to edit.
